

Project – Class 2

GroupGo – Group Transportation Planner

Application: GroupGo (Medium level)

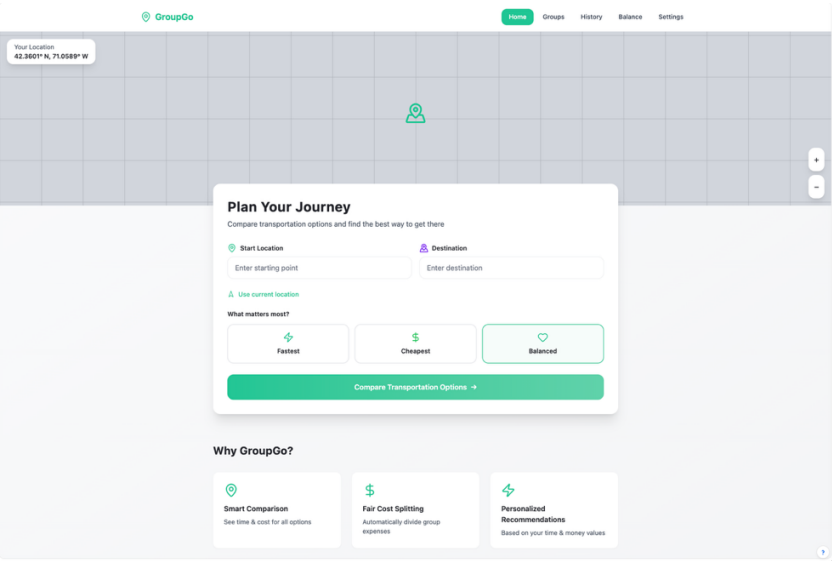

GroupGo is a web-based group transportation planner that helps users compare travel options by time and cost, split expenses among group members, and track trip history. The app applies a personal Time-Value Calculator to provide personalised recommendations based on each user's salary and working hours.

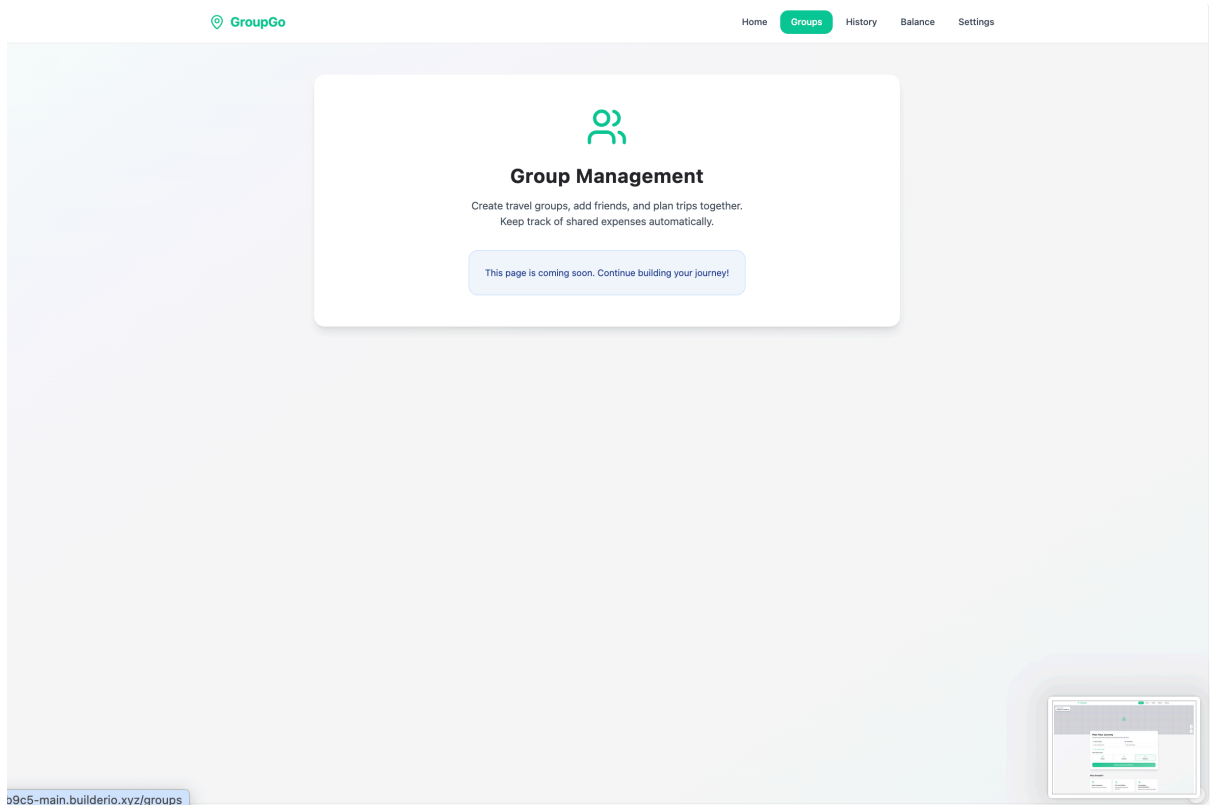

1. Screen list

Screen	Purpose
Home	Displays the journey planner with start/destination inputs, priority selector (Fastest, Cheapest, Balanced), and a Compare Transportation Options button. Shows the user's current GPS location on a map.
Groups	Create travel groups, add friends, and plan trips together. Keeps track of shared expenses automatically.
History	Lists all past trips with routes taken, transportation methods used, costs, and dates for each group.
Balance	Shows how ride-sharing costs are divided among group members and tracks outstanding financial balances.
Settings	Configures the Personal Time-Value Calculator by allowing the user to enter their monthly salary and average working hours.

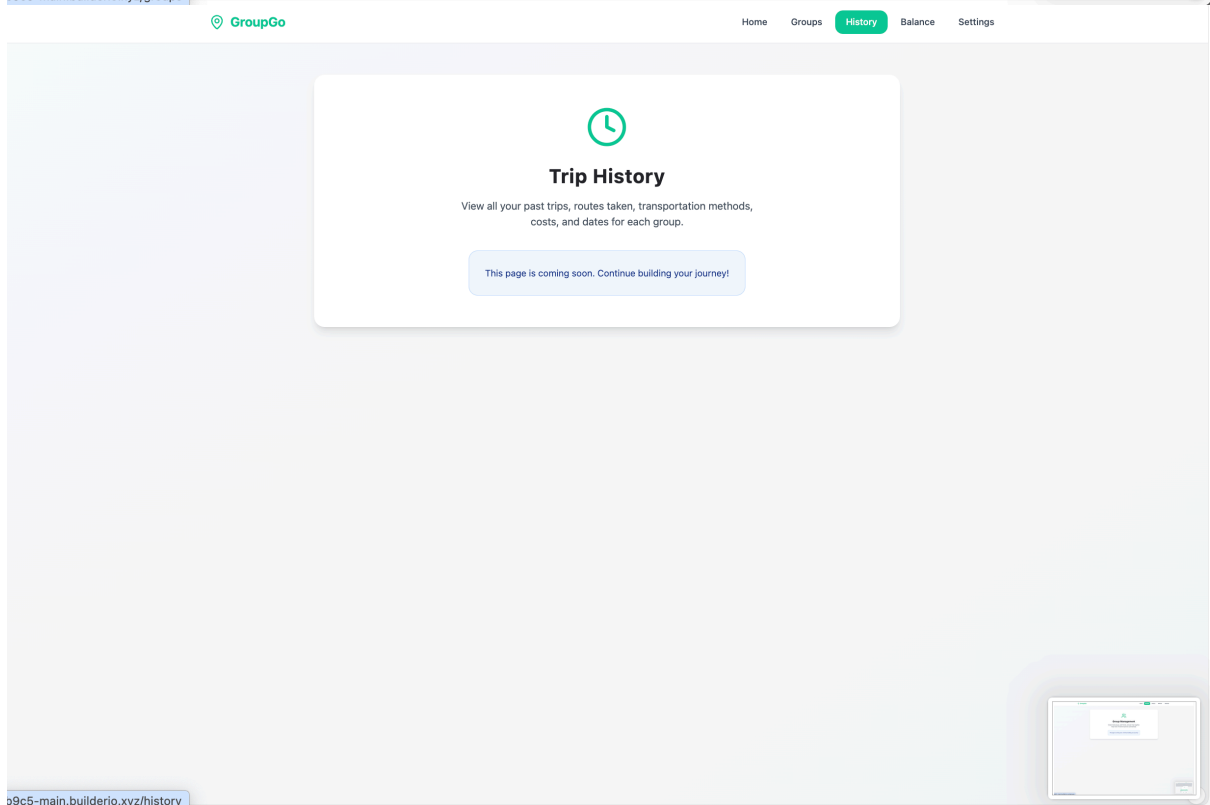

2. Wireframes

Wireframes created in Builder.io.

3. Navigation diagram

From	Action	To
Home	Tap 'Groups' nav link	Groups
Home	Tap 'History' nav link	History
Home	Tap 'Balance' nav link	Balance
Home	Tap 'Settings' nav link	Settings
Home	Tap 'Compare Transportation Options'	Results (Home)
Home	Tap 'Use current location'	Home (fills GPS)

4. Mapping to functional requirements

Screen	Functional requirements covered
Home	Detect and display current GPS location; accept manual start/destination input; priority preference selection (Fastest, Cheapest, Balanced); compare transportation options on demand.
Groups	Create and manage travel groups; invite friends; automatically track shared trip costs per group.
History	Display list of past trips sorted by date; show route, transport method, and cost for each trip; filterable by group.
Balance	Calculate and display per-member cost split for ride-sharing; track who owes what; show outstanding balances.
Settings	Accept monthly salary and average working hours; compute hourly time value; apply it to personalized transport recommendations.
